

Addition Master Thesis

In Chapter 4.2.8. MRCs on page 43, there are remarks about the number of MRCs and the behavior of it for the models 399 and 667. This figure is instead given as supplementary material and is not addressed correctly. This fact also resulted in the wrong referencing on page 43. “Figure ??” is supposed to refer to Figure 10.

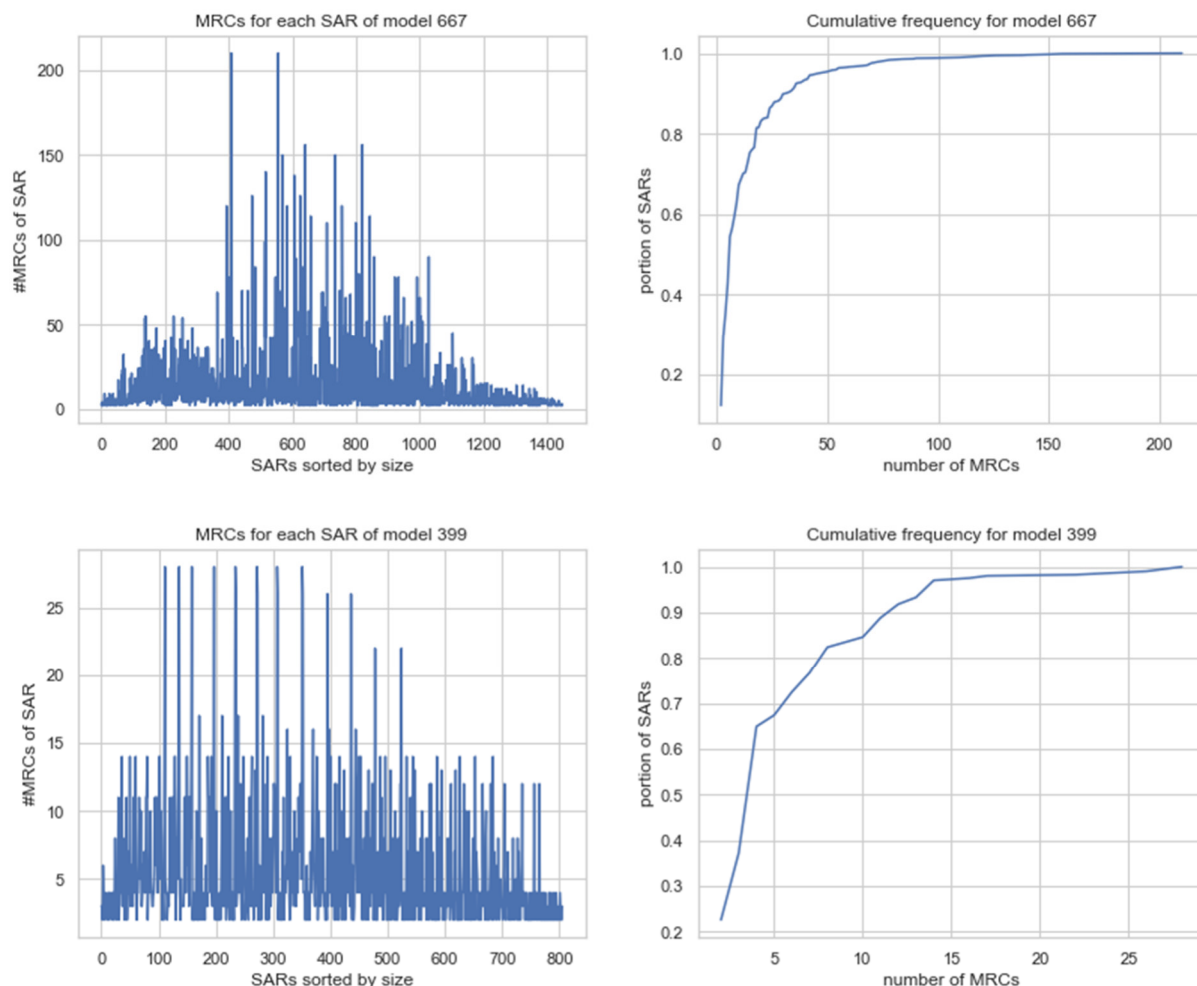

Figure 13: Distribution of the number of MRCs for the models BIOMD0000000667 (top) and BIOMD0000000399 (bottom).

The left side shows the number of MRCs for the list of SARs sorted by size, starting with the largest SAR. The second model shows a repetition of SARs with 28 MRCs. These are most likely SARs that are similar in their set of species and therefore have a similar build up of their MRCs.

On the right side, the cumulative frequency for the number of MRCs is shown. It starts at two, since this is the minimal number of possible MRCs, when the SAR is not an SAR₀.
